TREAD Reporting Engine & Services

Helping you meet the early warning reporting requirement of Transportation Recall Enhancement Accountability and Documentation (TREAD) Act

INTRODUCTION

Optimum InfoSolutions has been supporting Automotive, RV, Truck, Motorcycle and Tire manufacturers and suppliers quickly, easily and cost-effectively meet the requirement of NHTSA's TREAD Act that was enacted in 2001.

TREAD REPORTING ENGINE

Optimum's *TREAD* Reporting Engine delivers robust reporting functionality, allows users to drill down from aggregate to detailed data, and provides review and approval processes to help you submit the NHTSA reports as per the statutory requirements.

The solution's unique set of features set help you ensure the integrity of your reports before they are submitted to NHTSA.

The TREAD Reporting software is designed to be fast and flexible.

The application includes all of the essential functionality that is required by all impacted companies. Rather than developing new custom program or implementing a complex internal software application, our TREAD Reporting solution can be quickly configured for your specific needs.

Key features of the Tread Reporting Engine are:

- An easy to use web based user interface to manage all aspects of data import, processing, review and transmission to NHTSA

- Import of data from external data sources through structured interface files (CSV format)

- Allows users to capture information directly into the system

- Generate Preliminary reports for analysis & approval

- Allow single level of drilldown from summarized information to detailed information

- Generates final aggregate reports in the required format

- Transmitting the Reports to NHTSA using FTP process

- Tracking all previous submissions

- Search functionality

- Online help and glossary

- Role-based security to allow selective access and transaction rights, along with audit trail.

The TREAD application is available as a monthly service and is supported and maintained by Optimum on an on-going basis. We also ensure that the application always remain consistent with the reporting requirements of NHTSA.
